FLEX

LEADING THE NEXT GEN OF DESKTOP COLLABORATION
Being able to effectively communicate and express yourself are basic human needs. As we become a more digital society, we interact with more touch devices and intuitive tools to communicate. But where personal devices have already evolved, work tools have not.

Audio without an echo or background noise and natural video angles are all aspects needed to truly express yourself in a meeting. Now, an opportunity to do this all on your desktop with intuitive touch for seamless writing is here.

Newline has developed an all-new concept that enables you to communicate naturally in the digital workspace. A product that will revolutionize the way you work everyday. Meet FLEX!
HELLO I AM FLEX
WHAT IS YOUR NAME?

I AM AN ALL-IN-ONE DESKTOP COLLABORATION DEVICE
I HAVE A WORLD-CLASS TOUCH AND WRITING EXPERIENCE
I AM A HIGH-END PERSONAL VIDEOCONFERENCE APPLIANCE
I CAN PLUG AND PLAY WITH YOUR LAPTOP
I AM HERE TO REVOLUTIONIZE YOUR WORKDAY

NICE TO MEET YOU!
Intuitive button design will ensure you are always in control while you are on a video call. Not all videoconferencing software makes it easy to control your audio and video. You may often find yourself looking for the icons to mute/unmute or to reveal your video. FLEX ensures these functions are always within reach with cam & mic control, no matter how the software may have moved the control menu.
Using touch devices has become second nature, so the writing experience must also be seamless. Flex has been developed with these needs in mind.

Easily tilt Flex into a comfortable position for writing. Palm rejection allows you to use the pen in a natural writing position. The Flex active pen provides a natural handwriting experience with high precision and low latency. There are two built-in hotkeys that let you quickly switch to eraser or access “right-click”. Simply annotate over any document using any software and save your notes.
Flex wouldn’t be called Flex if its features and functions didn’t live up to the name. Simply plug in your laptop and instantly upgrade to a world-class touch, writing, and videoconferencing experience. Easily power your device with the powered USB-C connection. No need for a learning curve, just use your existing desktop device. Want to remove all the clutter and cables from your desktop? Plug in an SDM for fully integrated computing power. How FLEX is that?

How Flex I am

PLUG AND PLAY ANY WAY
Flex sees you, Flex hears you, and Flex recognizes you. Video meetings can often become tiring. Bad sound or image quality complicates clear communication and ultimately work productivity suffers. Flex can ensure a better experience from your end—as if people are in the room with you! Capture your voice without background interference. Experience clear visuals with the 4K camera. Enjoy a better sound experience through high-end speakers with a subwoofer.
FLEX is for everyone. No matter what your profession is, Flex helps you to communicate and intuitively express yourself in the digital workspace.

On your office desktop, as a creative, in healthcare sector, a classroom or lecture hall, or in the most personal workspace called home. Increase productivity, join video calls and host collaboration sessions. Join the Flex gen!
